EDUCATION

University of Toronto

2023–Present

Bachelor of Applied Mathematics Specialist, Statistics Major, Computer-Science Minor

Toronto, ON

Relevant Coursework

Computer Programming, Software Design, Data Structures and Algorithms, Graph Theory, Data Analysis, Probability and Statistics, Statistical Reasoning and Data Science

EXPERIENCE

Shopify

May–Aug 2025

Software Engineering Intern

Toronto, ON

- Brought German VAT submissions into compliance with new regulations unblocking affected merchants and reducing compliance risk by integrating the German tax-code API and aligning Shopify tax flows with the updated laws.
- Increased new-merchant activation and retention routing about 100 merchants/day through the flow by launching a partner-attach system that automatically pairs new merchants with onboarding advisors.
- Resolved cross-disciplinary technical debt assigned by adjacent teams, improving system reliability and reducing recurring issues by collaborating with engineering and product stakeholders to implement scalable solutions.

PROJECTS

[Plantinarium](#), University of Toronto Group Project

2024

- Plantinarium identifies plants from uploaded photos, allowing users to share, edit, annotate, and view them with others.
- Contributed to the user backend, implementing features like login, logout, user deletion, and sign-up.
- Implemented using Java, Java Swing, MongoDB for the user information, and PlantNet for the plant recognition AI.

F1 Race Winner Predictor, Personal Project

2024

- Built a supervised pipeline to predict the next Formula 1 race winner using driver/constructor form rolling finishes/points, qualifying results, track characteristics, and weather forecasts.
- Collected and cleaned historical race and weather data; engineered features like driver–track history, team pace trends, pit-stop reliability, and rain probability.

Modular Tower Defense, Personal Project

2023

- Built a tower-defense game with a C# core for AI/wave/combat integrated into Unity via native plugins; shipped mobile support (iOS/Android) with touch-first UI.
- Designed a resource economy that includes income, interest, refunds and modular towers with upgrade trees and status effects; added in-game balancing tools for tuning costs/DPS/pacing.

TECHNICAL SKILLS

Languages Python, Java, C#, JavaScript, Ruby, SQL, R

Frameworks/Libraries Ruby on Rails, React, React Native, Java Swing, Pandas, NumPy

Platforms/Tools Unity, GitHub
